Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) zinc finger, ordered FI. F2, F3 from N-terminus to C-terminus, where the target site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (II) comprising (I); (2) a polypucleotide (III) encoding (I) or (II); and (S3) designing (M) (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, selecting the F2 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc
                                                                                                                                                        The present invention relates to a zinc finger protein that binds to a target site in one or more vascular endochelial growth factor (VEGF) genes. The protein is useful for modulating expression of a VEGF gene, thereby regulating angiogenesis and vasculogenesis. This can be used to treat atherosclerosis, ischaemia, arthritis, wounds, ulcers, tumours, diabetic retinopathy or psoriasis. The present sequence is a peptide shown in the invention.
                               New zinc finger protein that binds to target site in vascular endothelial growth factor gene, useful for modulating expression of the gene and for treating atherosclerosis, ischemia, arthritis, wound or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to

```
that binds to a target site. (I) is useful for recognition of triplet target subsites having the nucleotide G in the 5'-most position of the subsite. (I) is useful in studying gene function, and for human therapeutics and plant engineering. (I), (II) or (III) is useful in therapeutic methods to modulate the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of gene expression. (I) has improved affinity and specificity for their target sequences, as well as enhanced biological activity. ABQ71211 to ABQ72214 and ABB48191 to ABB51230 represent DNA target sequences and zinc finger peptides which are given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   diabetic retinopathy; psoriasis; arthropathy; cancer; tumour growth; gene therapy; antitatherosclerotic; vasotropic; antiarthritic; vulnerary; antiuleer; cytostatic; antipsoriatic; antidiabetic; ophthalmological; osteopathic; antiinfertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a zinc finger protein that binds to a target site in one or more vascular endothelial growth factor (VEGF) genes. The protein is useful for modulating expression of a VEGF gene, thereby regulating angiogenesis and vasculogenesis. This can be used to treat atherosclerosis, ischaemia, arthritis, wounds, ulcers, tumours, diabetic retinopathy or psoriasis. The present sequence is a peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the

The protein is useful for modulating expression of a VEGF gene, thereby regulating anglogenesis and vasculogenesis. This can be used to treat atherosclerosis, ischemenia, arthritis, wounds, ulcers, tumours, diabetic retinopathy or psoriasis. The present sequence is a peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New zinc finger protein that binds to target site in vascular endothelial growth factor gene, useful for modulating expression of the gene and for treating atherosclerosis, ischemia, arthritis, wound or

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) zinc finger, ordered FY, F2, F3 from N-terminus to C-terminus, where the target site comprises, in 3'-5' direction, a first (SI), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (II) comprising (I); (2) a polypuclectide (III) encoding (I) or (III); and (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, selecting the F2 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc finger such that it binds to the S3 target subsite, thus designing (I) that binds to a target site. (I) is useful for recognition of triplet target subsite. (I) is useful for sucception of the subsite. (I) is useful in studying gene function, and for human therapeutics and plant engineering. (I) (II) or (III) is useful in therapeutic methods to modulate the expression of a target region within
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of gene expression. (1) has improved affinity and specificity for their target sequences, as well as enhanced biological activity. ABQ71213 to ABQ7214 and ABP48191 to ABP51230 represent DNA target sequences and zinc finger peptides which are given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) zinc finger, ordered FI, F2, F3 from N-terminus to C-terminus, where the target site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (CI) comprising (I); (2) a polynuclectide (III) encoding (I) or (II); and (S3) designing (I); (2) a polynuclectide (III) encoding (I) or (III); and (S3) designing (I); (I) involves selecting the F2 zinc finger such that (I) binds to the S1 target subsite, and selecting the F3 zinc (I binds to the S2 target subsite, and selecting the F3 zinc (I binds to that it binds to the S3 target subsite, thus designing (I) chat binds to a target site. (I) is useful for recognition of triplet target subsites having the nucleotide G in the 5'-most position of the subsites and plant engineering (I), (II) or (III) is useful in the subsite specific detection of the rapeutics and plant engineering (I), (II) or (III) is useful in the specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of gene expression. (I) has improved affinity conditions of the present blanch are given the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ó
                                                                                                                                                                                                                                                                                                                                     New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) a target site, comprising a first (FI), a second (F2), and a third (F3) tranger, ordered FI, F2, F3 from N-terminus to C-terminus, where the target site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (II) comprising (I); (2) a polynucleotide (III) encoding (I) or (III); and (I) involves selecting the F1 zinc finger such that the binds to the S1 target subsite, selecting the F2 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc finger such that it binds to the S3 target subsite, thus designing (I) that it binds to the S3 target subsite, thus designing (I) that binds to a target subsite. (I) is useful for recognition of the carget subsites having the nucleotide G in the 5'-most position of the subsite. (I) is useful in the such of sequence specific detection of the carget nucleic and plant engineering (I), (II) or (III) is useful in the analyset, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of gene expression. (I) has improved affinity the contraction of the subsite of modulate the expression of a target region within the subsite of the subsi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     biological activity. ABQ71213 to ABQ72214 and ABP48191 to ABP51230 represent DNA target sequences and zinc finger peptides which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The present in whention describes a zinc inger protein (1) that binds to zinc finger, ordered F1, F2, F3 from N-terminus to C-terminus, where the target site, comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (1) a polypeptide (II) comprising (1); (2) a polynucleotide (III) encoding (1) or (II); and (3) target subsite. Also described are: (1) a polypeptide (II) comprising (M) (I) involves selecting the F2 zinc finger such that the binds to the S2 target subsite, and selecting the F3 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc that the binds to the S3 target subsite, thus designing (I) that binds to a target site. (I) is useful for recognition of the target subsites having the nucleotide G in the 5'-most position of the subsite. (I) is useful in studying gene function, and for human therapeutics and plant engineering. (I), (II) or (III) is useful in therapeutics and plant engineering. (I), (II) or (III) is useful in therapeutics and plant engineering. (I), (II) or (III) is useful in therapeutics and function of modulate the expression of a target region within the subject, in diagnostic methods for sequences specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of gene expression. (I) has improved affinity on specificity for their target sequences, as well as enhanced biological activity. ABG71213 and ABB48191 to ABB51230 represent DNA target sequences and zinc finger peptides which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a zinc finger protein (I) that binds to
                                                                                                                                                                                                                                                                                                                                                                                                                                        New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Zinc finger protein; ZFP; DNA binding protein; zinc finger.
                                       Zinc finger protein; ZFP; DNA binding protein; zinc finger.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     91.7%; Score 33; DB 23; Length 7; 85.7%; Pred. The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) is a target site, comprising a first (FI), a second (F2), and a third (F3) target site comprises, in 3'-5' direction, a first (SI), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (II) comprising (I); (2) a polypucieotide (III) encoding (I) or (III); and (II) involves selecting the F1 zinc finger such that the binds to the S1 target subsite, selecting the F2 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc finger such that it binds to the S3 target subsite, and selecting the F3 zinc finger such that it binds to the S3 target subsite, thus designing (I) target subsites having the nucleotide G in the 5'-most position of the subsite. (I) is useful in studying gene function, and for human therapeutics and plant engineering (I), (II) or (III) is useful in therapeutics specific detection of a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of gene expression. (I) has improved affinity and specificative for their target sequences, as well as enhanced biological activity. AB071213 to AB071214 and AB048191 to AB051230 represent DNA target sequences and zinc finger peptides which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                             New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) at target site, comprising a first (FI), a second (F2), and a third (F3) target site comprises, in 3'-5' direction, a first (SI), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (CI) comprising (I); (2) a polynuclectide (III) encoding (I) or (III); and (S3) target subsite. Also described are: (I) a polypeptide (CI) comprising (I); (2) a polynuclecting the F1 zinc finger such that the binds to the S1 target subsite, and selecting the F2 zinc finger such that it binds to the S3 target subsite, in thus designing (I) that binds to a target site. (I) is useful for recognition of the companient of the binds to a target site. (I) is useful in the 5'-most position of the therapeutics and plant engineering (I). (II) or (III) is useful in therapeutics and plant engineering (I). (II) or (III) is useful in the sample, and in assays to determined the charget nucled acid in a sample, and in assays to determined the charget and specificity for their target sequences, as well as enhanced bloogloal activity. ABG71213 to ABG71214 and ABP48191 to ABP51230 crepresent DNA target sequences and zinc finger peptides which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                 New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Zinc finger protein; ZFP; DNA binding protein; zinc finger.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    91.7%; Score 33; DB 23; Length 7; 85.7%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (F1), a second (F2), and a third (F3) zinc finger, ordered F1, F2, F3 from N-terminus; where the target site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (1) a polypeptide (II) encoding (I) or (II); and (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, and selecting the F3 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc finger such that the binds to the S2 target subsite, and selecting the F3 zinc finger such that the binds to the S3 target subsite, and selecting the F3 zinc finger such that binds to a target site. (I) is useful for recognition of triplet that binds to a target site. (I) is useful for recognition of the causaite. (I) is useful in studying gene function, and for human it can be subsite. (I) is useful in studying gene function, and for human is a subject. In diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the compensation of gene expression. (I) has improved affinity and specificity for their target sequences, as well as enhanced contropred and function of gene expression. (I) has improved affinity and specificative for their target sequences, as well as enhanced contropred the process and zinc finger peptides which are given the become in the sequence in the procession of the procession of the procession in the procession of the procession DNA target sequences and zinc finger peptides which are given the procession of the procession that the sequence is an enhanced and procession of the procession that the sequences and zinc finger peptides which are given the procession of the procession that the sequences and zinc finger peptides which are given the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                       New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) zinc finger, ordered F1, F2, F3 from N-terminus to C-terminus, where the target site comprises, in 3'-5' direction, a first (SI), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (II) comprising (I); (2) a polynuclectide (III) encoding (I) or (III); and (I) involves selecting the F1 zinc finger such that the binds to the S1 target subsite, and selecting the F3 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc finger such that binds to the S1 target subsite, and selecting of F1 zinc finger such that binds to the S1 target subsite, thus designing (I) that binds to a target site. (I) is useful for recognition of triplet target subsites having the nucleotide G in the 5'-most position of the subsite. (I) is useful in studying gene function, and for human thermal such distribute the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the blenotype and function of gene expression. (I) has improved affinity and specificity for their target sequences, as well as enhanced biological activity. AB071213 to AB072214 and AB048191 to AB051230 in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ő
                                                                                                         New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) care tringer, ordered F1, F2, F3 from N-terminus to C-terminus, where the target site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (II) encoding (I) or (II); and (I) (I) a polynuclectide (III) encoding (I) or (III); and (I) (I) involves selecting the F1 zinc finger such that the binds to the S1 target subsite, and selecting the F3 zinc (Inger such that it binds to the S2 target subsite, and selecting the F3 zinc that binds to a target site. (I) is useful for recognition of triplet target subsites having the nucleotide G in the 5'-most position of the subsites having the nucleotide G in the 5'-most position of the subsite (I) is useful in studying gene function, and for human thermody to modulate the expression of a target region within the a subsite; and plant engineering (I), (II) or (III) is useful in the anotype and function of gene expression. (I) has improved affinity and specificity for their target sequences, as well as enhanced belongical activity. ABG71211 and ABB48191 to ABP51330 crepresent DNA target sequences and zinc finger peptides which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter;
                                                                                                                                                                                                         New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                 The present invention describes a polypeptide (I) capable of binding to a nucleic acid comprising a viral nucleotide sequence. Also described a excite; (2) a composition (II) comprising (I) and a exciplent, diluent or carrier; (2) a nucleic acid molecule (III) encoding (I); (3) an expression vector (IV); and (5) modulating transcription by targeting nucleic acid sequences that overlap with transcription factor binding sites by the use of engineered zinc finger molecules. (I) has virucide and conclete and for targeting a native viral nucleic acid molecule, and for targeting a native viral nucleic acid sequence with a nucleic acid binding polypeptide. (I) is also useful for downregulating a viral packagaing or viral transcription in a cell infected with the virus by contacting the virus and/or the cell with (I). (I) is also useful for modulating a viral function in a system. (I) is also useful for modulating a viral function in a system. (I) is nicelules to which they bind. More preferably, they are highly effective in repressing gene expression from the HIV-I promoter. ABBO5064 to event if the present the present sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more
                    Novel viral nucleic acid binding polypeptide useful for binding viral promoter sequences, and modulating expression of gene linked to viral promoter sequence, and for treating human immunodeficiency virus
                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL0156-ABL30511), expressed DNA sequences (ABL01876) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endopthelmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for

pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

P acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of p. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention of adtermining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to character treat P. acnes proteins. These antibodies can be used to character treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

for Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful Example 1; SEQ ID No 14786; 1069pp; English. treating acne vulgaris

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne,

pustuiosis, imperiosis and observable the pustuiosis, imperiosis and includes to pustuiosis, imperiosis and includes the central nervous system, however it is particularly involved in the inflammatory resisting associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting the sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to therefore treat P. acnes infections. The antibodies may also be used to therefore treat P. acnes infections. The antibodies may also be used diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

method of producing a polypetide comprises: (a) introducing into a respiratory-deficient cell mutant (1) one or more first nucleic acid sequences (NAS) which complement the respiratory defect and (ii) a second NAS which encodes the polypeptide, (b) cultivating the cell in a culture medium under aerobic conditions suitable for expression of the first and second NAS, and (c) isolating the polypeptide from the culture medium. The first NAS encodes a component of the electron transport chain, or an enzyme involved in the biosynthesis of uniquinone, flavino or haem (e.g. ALAS). Also claimed is a respiratory-deficient mutant cell that is haem cellent (see AAV5426). The method is used to select and maintain transformed cells, to ensure high level expression and genetic stability of transformants during culture. It is applicable to all constraint formatical fermentation processes, requiring only that the cells

The DNA can be used in the method of the invention for producing a haemoprotein. The method comprises: (a) introducing producing a haemoprotein. The method comprises: (a) introducing into a filamentous fungal cell: (i) one or more control sequences capable of directing the expression of a haeme biosynthetic enzyme encoded by a nucleic acid sequence endogenous to the filamentous fungal cell, where one or more of the control sequences are operably linked to the nucleic acid sequence; and/or (ii) one or more copies of one or more second nucleic acid sequences encoding a haeme biosynthetic enzyme; (b)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5-aminolevulinic acid synthase; porphobilinogen synthase;
haemoprotein production; filamentous fungus; haeme biosynthetic enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                            synthase) of Aspergillus niger IFO 4177. Its annio acid sequence was deduced from the isolate hemA gene (see AAV04102) and shares 81% identity with the Aspergillus nidulans ALA synthase. The enzyme catalyses the reaction of giycine and succinil-CoA to form 5-aminolaevulinic acid, which is useful as a herbicide. It is also the rate-determining enzyme in biosynthesis of haem in liver cells and differentiating erythrocytes, so overexpression in a cell can be used to increase the yield of haemoproteins produced by the cell in the absence of haemin supplementation. Host cells, especially bacterial, fungal, filamentous fungal and yeast cells, transformed with a vector that includes the hemA gene are claimed, and can be used in a claimed method for producing ALA synthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Method for the production of haemo:protein in a filamentous fungal cell - by introducing a haeme biosynthetic enzyme coding sequence and control sequences into the cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence is the 5-aminolevulinic acid synthase of Aspergillus

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, periphera neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
                      production of the haemoprotein and the haeme biosynthetic enzymes; and (c) recovering the haemoprotein from the nutrient medium of the filamentous fungal cell. The method is used to yield commercially significant quantities of haemoprotein in filamentous fungal strains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; .CNS; Alzheimer's; Parkinson's disease; Humtington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ä

                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium coryneform bacterium and identifying a particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.
           utilisation of the activities such as: Immune system suppression, Activity.hibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.

Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mizoguchi H, Ando S, Hayashi M, Ochiai K, Yokoi H;

                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                          AAF67743 to AAF68080 encode the Corynebacterium glutamicum membrane construction and membrane transport (MCT) proteins given in AAB76510 to AAB76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria (e.g. Brevibacterium lactofermentum), the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for transformation.

AAF68082 and AAF68082 represent sequencing primers which are used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Corynebacterium glutamicum; brevibacterium lactofermentum; MCT; membrane construction and membrane transport protein; petroleum spill; hydrocarbon degradation; gram positive aerobic bacterium; marker; identification; microorganism; fine chemical production; transformation; genome mapping; genetic engineering.

construction and membrane transport (MCT) proteins given in AAB76510 to AAB76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria (e.g. Brevibacterium lactofermentum), the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for transformation. AAF68082 and AAF68082 represent sequencing primers which are used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Corynebacterium glutamicum nucleic acids encoding membrane construction and membrane transport proteins or their portions, useful for typing or identifying C. glutamicum or related bacteria, and as markers for transformation .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAF67743 to AAF68080 encode the Corynebacterium glutamicum membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           B. subtilis rib operon protein translated from reading frame 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 comprises, providing a recombinant bacterium containing an exogenously introduced bacterial ORF (open reading frame) 3 (or ORF5) structural gene and an exogenous promoter, culturing the bacterium, and recovery of the product. The method is useful for the production of large quantities of riboflavin (vitamin B2). Sequences AAY21801-803 are protein sequences AAX21804-806 are protein sequences translated from three different reading frames of B. subtilis rib operon. Reading frames of the complementary sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Riboflavin; rib operon; yeast; bacteria; transformation;

New zinc finger polypeptides that bind DNA containing modified bases, used as diagnostic and research reagents and for regulating gene transcription

Example 4; Page 36; 56pp; English.

This invention describes a novel zinc finger (ZF) polypeptide (I) that binds to a target DNA sequence (II) containing a modified base but not to an otherwise identical sequence containing the equivalent unmodified base. The invention also describes methods for preparing a DNA-binding base. The invention also describes methods for preparing a DNA-binding containing a 5-methylcytosine (meC) residue. (I) are used as diagnostic reagents (for detecting modified nucleic acids in complex mixtures, including differentiation of single-base modifications), in research and to produce chimeras, e.g. by fusion to a catalytic domain of a centralition express (the product can then cleave only modified DNA), or to a DNA cleavage or activating domain (to give products that can regulate gene transcription, by sequence-specific cleavage or activation, dependent on presence of a modified base). (I) recognize modified bases in preference to unmodified ones, in a sequence-dependent manner, so have extremely high specificity. This sequence repercents a zinc finger clone peptide fragment described in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A)Molecule type: mRNA
A)Residues: 1-576 <COM>
C)Comment: This enzyme catalyzes the reversible conversion of isocitrate to succinate
is involved in storage lipid mobilization during the growth of higher plant seedling
C;Superfamily: isocitrate lyase
C;Keywords: carbon-carbon lyase; glyoxylate bypass; oxo-acid-lyase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ä
                                                                                                                                                                                                                   isocitrate lyase (EC 4.1.3.1) - rape
N'Alternate names: isocitratase; isocitratase; isocitritase
C'Species: Brassica napus (rape)
C'Species: 30-Sep-1992 #sequence_revision 30-Sep-1992 #text_change 30-Jun-1993
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

-! FUNCTION: INVOLVED IN STORAGE LIPID MOBILIZATION DURING THE GROWTH
OF HIGHER PLANT SEEDLING.
-!- CATALTITE ACTIVITY: ISOCILEAE —: SUCCINATE HYPOXYLATE.
-! PATHWAY: FIRST STEP IN GLYOXXLATE BYPASS, AN ALTERNATYPE TO THE
TRICARBOXYLIC ACID CYCLE (IN BACTERIA, PLANTS, AND FUNGI).
-! SUBDINIT: HOMOTERTAKER (BY STMILARTY).
-! SUBCELLULAR LOCATION: Glyoxysomal.
-! SUBCELLULAR LOCATION: Glyoxysomal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     STRAIN=CV. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
